

FLY FOG TREATMENT PREP FORM

These steps are required and will assist in the elimination of your fly population.

Please make required preparations the day prior to your scheduled service day.

All steps must be completed for treatment to be performed.

1. _____ **Inspection and removal of nesting material is key in full elimination.** Fruit flies or what are mistakenly called gnats will usually nest in dirty garbage disposals, soda, wine, or beer cans in recycling bins, rotting fruit or vegetables, or slime or sludge as you might find in a stagnant aquarium or dirty sink. Dishes should be washed daily, trash removed regularly, and the above areas inspected and cleaned as needed.
2. _____ **Clear ALL countertops in the kitchen and bathroom(s).** Make sure all food is sealed tightly in bags or containers.
3. _____ **Resident and pets must be out of the unit for a minimum of 2 hours after treatment. Fish tanks must be turned off and covered.**

-----CUT HERE-----

PLEASE LEAVE THIS SIGNED PART OF FORM IN ENVIROSMART MULTIFAMILY PEST SOLUTIONS LOG BOOK

I have read, understand and will follow the required preparations for treatment.
